What is Farmapram?

Farmapram is a brand name for alprazolam, a medication that belongs to the benzodiazepine class. It is commonly prescribed to help manage:

- Generalized anxiety disorder (GAD)

Farmapram works by affecting neurotransmitters in the brain, helping to calm excessive activity and promote a sense of relaxation and balance.

By calming the central nervous system, Farmapram helps individuals regain control over overwhelming feelings and maintain a more stable mental state.
